Ahad Yousaf

Introduction

For my elective class project, I built this movie tracker website focused on Christopher Nolan's films. I wanted to make something fun and interactive for fans like me. The site was built using HTML, CSS, JavaScript, and Bootstrap.

Target Audience

This website is designed for Nolan fans—people who love his unique storytelling and dark, cinematic style. Whether you've been a fan for years or are just starting to watch his movies, this site is for you.

Design Considerations

I had to choose between a classic, Shakespearean vibe or a modern, edgy look. Since I really love Nolan's films, I went with a modern dark aesthetic that fits the cinematic feel. I used a dark galaxy background, a simple movie tracker, and added features like search, sorting, and even a fun confetti effect when a movie is marked as completed.

Resource Citations

I gathered the movie details and general information by simply Googling for Nolan's films. All my resource citations are from general online searches.

Conclusion

The final website meets all the requirements: you can add, delete, search, and sort movies, plus it includes a cool confetti celebration for completed movies. More than just a class assignment, this project is a personal tribute to my love for Christopher Nolan's movies.
